

Assignment Lab 6

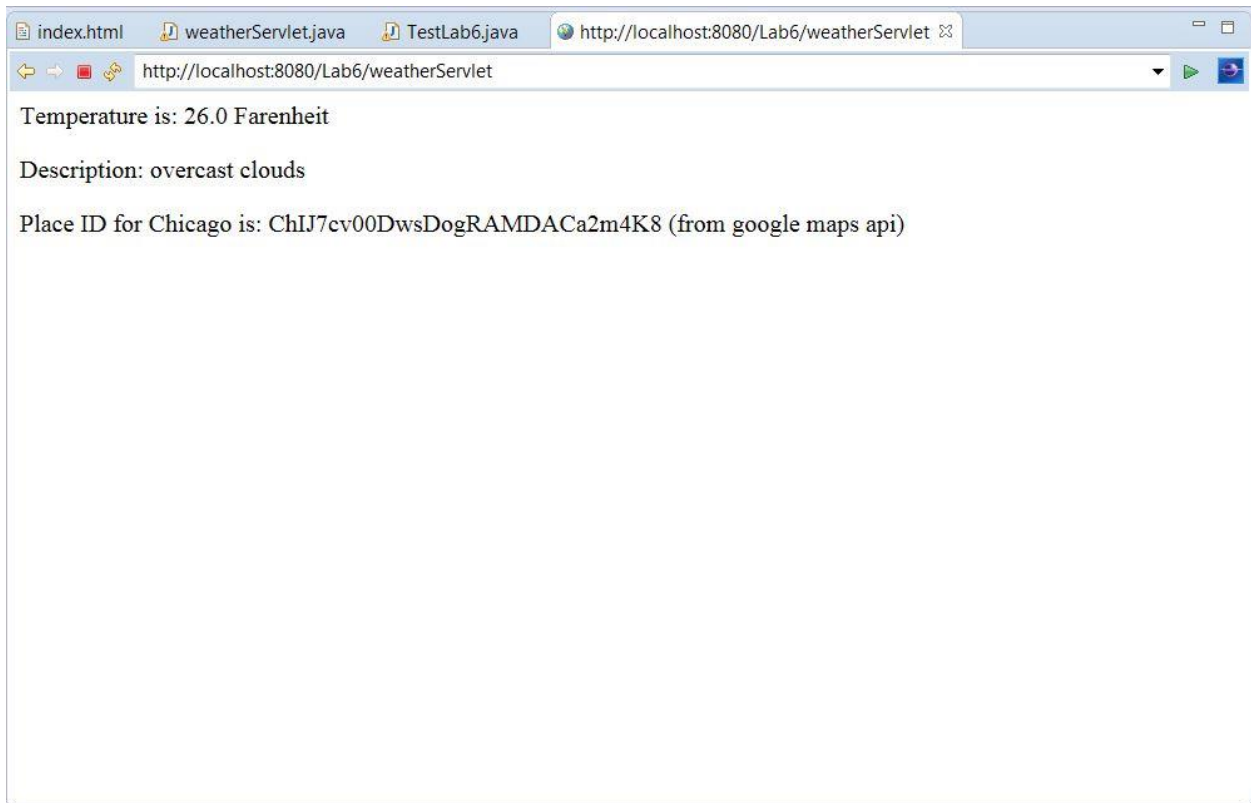

Webserver proxy to integrate data with two REST services.

First Page:

A screenshot of a web browser window showing the first page of the application. The address bar displays `http://localhost:8080/Lab6/index.html`. The page content includes a text input field labeled "Enter the City:" and a button labeled "Get Weather".

Output Page: Openweathermap API and Google maps API.

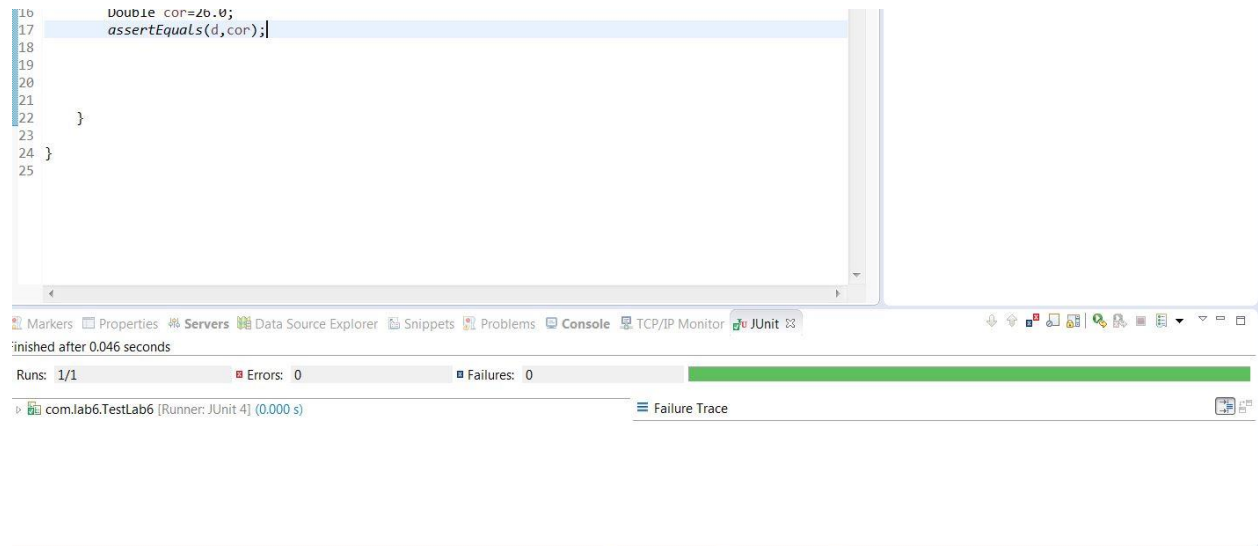

A screenshot of a web browser window showing the output page of the application. The address bar displays `http://localhost:8080/Lab6/weatherServlet`. The page content includes the following text:

- Temperature is: 26.0 Farenheit
- Description: overcast clouds
- Place ID for Chicago is: ChIJ7cv00DwsDogRAMDACA2m4K8 (from google maps api)

Two test case in Junit.

1. Success:

2. Failure:
